

In the Drawings:

The Figure is amended by submission of the attached Replacement sheet.

### REMARKS

This Amendment is being filed preliminary to examination, in response to a restriction requirement communicated in the Office Action mailed April 12, 2006.

Accompanying the Amendment is an Information Disclosure Statement disclosing a reference, U.S. Patent No. 6,154,895, that has recently come to Applicant's attention.

Preliminary to examining the application, the application is amended.

The specification is amended to introduce the term "apron" to call out a previously disclosed structure, and therefore functions as a label for use in the amended the claims. Though this term is believed to be the correct term of art for the structure disclosed and therefore is believed to be an appropriate label that facilitates understanding of what is being claimed, the purpose for its introduction is merely to identify or point to the structure described in the specification that supports the structure claimed in the amended claims, and is therefore not new matter.

The Figure is amended by adding a reference number 17, corresponding to the amendment to the specification, and to correct the existing reference number 26, which should be 16 as indicated and described in the specification at Page 5, lines 13 - 22. Also, the word "FIGURE" has been removed.

Respectfully submitted,

Garth Janke  
Reg. No. 40,662  
(503) 228 - 1841
